

## Devon at Aluminum Avenue

Hampton, Virginia

McKinney & Company provided Devon USA with full-service planning, engineering and architectural design for two industrial warehouse buildings totaling more than 700,000 SF. The 45-acre site was a 1960's urban renewal site formerly occupied by housing for shipyard workers and an airfield in the 1920's. Located in the Copeland Industrial Park of Hampton and completed in 2008, Building B is leased by Northrop Grumman for parts storage.

Both buildings are steel frame with single ply membrane roof and external gutters with a clear height of 30-feet. Building A is constructed of pre-cast wall panels and Building B made use of concrete tilt-up wall panels.
