

## North Boundary Street Complex / Sorority Court The College of William and Mary Williamsburg, Virginia

McKinney & Company provided mechanical and electrical engineering design services to the College of William and Mary for renovations to the North Boundary Street Building Complex. The project consisted of upgrading a zone heating system from a central steam system to individual, building-level, high-efficiency water heating and domestic water heating for 15 campus buildings at the College's Sorority Court complex. In addition to upgrading the central heating systems, the project provided air conditioning to two buildings; Western Union and College Apartments. Numerous dormitories, sorority houses and apartments were included in the scope of the project.
